

## FEATURES

Unity gain single-channel signal conditioning module that interfaces, filters, and isolates a  $\pm 10$  Volt input signal.

Features a nonlinearity of  $\pm 0.02\%$  maximum and an accuracy of  $\pm 0.1\%$  maximum.

All 7B21 series modules are mix-and-match and Hot Swappable.

## APPLICATIONS

Industrial signal conditioning

Industrial signal isolation

Industrial signal filtering

## PRODUCT OVERVIEW

The 7B Series of signal conditioners feature small size, low cost and a wide output voltage range for a variety of applications including process control and factory-floor environments. The single-channel 7B modules accept inputs from a range of transducers and are fully rated over the extended  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  industrial temperature range.

All 7B Series modules are rated for a nominal power supply input of +24 VDC; and, for maximum flexibility, they will accept supply voltages in the +14 VDC to +35 VDC range. The input modules, with the exception of the 7B21, provide a high-level output voltage that is factory configured for either the +1 V to +5 V or 0 V to +10 V range. The 7B21 is a unity gain, isolated input module with an input/output range of +10V. Output modules are available that provide either isolated process current or isolated bipolar voltage output. Model 7B39 converts either a +1 V to +5 V input to a 4 to 20 mA output or a 0 V to +10 V input to a 0-20 mA output. The input/output ranges of the 7B39 are factory configured. The 7B22 is a unity gain module that provides an isolated +10V output signal. All modules have a universal pin-out and may be readily hot-swapped under full power without disrupting field wiring.

Each module accepts analog transducer signals and transfers them to a process control or factory data collection system without the inherent noise, non-linearity, drift and extraneous voltages which frequently accompany the signals.

## FUNCTIONAL BLOCK DIAGRAM

Figure 1. 7B21 Functional Block Diagram

The modules feature a maximum nonlinearity of  $\pm 0.02\%$  and are factory calibrated to guarantee a maximum accuracy specification of  $\pm 0.1\%$ .

The 7B Series offers up to 1500 V rms continuous common mode voltage isolation and 120 V rms of field wiring input protection. The power supplies necessary to drive each of the individual module's input circuitry are internally isolated, enabling the 7B Series modules to offer true channel-to-channel isolation of the input signals.

The modules directly accept analog signals from thermocouples, RTDs, current loop powered transmitters, and other process control signals. The 7B Series modules amplify, linearize, isolate, protect and convert the transducer output signals to standardized analog inputs for high-level analog I/O subsystems. The 7B Series Subsystem consists of 19-inch rack-compatible hardware (model AC 1363), with universal mounting backplane and a family of plug-in (up to 16 per backplane) input and output signal conditioning modules. Four-, eight-, and sixteen-channel backplanes are available. Each backplane incorporates screw terminals for easy power connections and field wiring, and includes a 25-pin D-type connector for interfacing the high-level single-ended voltage outputs to the user's equipment. Gold-plated sockets are provided on each channel of the backplane to ensure the reliability of each module's electrical connection.

## GENERAL DESCRIPTION

The 7B21 is a unity gain single-channel signal conditioning module that interfaces, filters and isolates a +10 Volt input signal and provides a protected precision output of +10 Volt. Model 7B21 features a nonlinearity of +0.02% maximum and an accuracy of +0.1% maximum (+0.01% typical). To accurately measure low level signals in electrically noisy environments, 1500 V rms of galvanic transformer-based isolation with a common mode rejection (CMR) of 100 dB @ 50/60 Hz is provided. Rated to operate with a nominal +24 VDC supply, Model 7B21 is mix-and-match and hot-swappable with other 7B Series input modules, so it can be inserted or removed from any socket in the same backplane without disturbing system power.

The floating differential input of Model 7B21 is fully protected up to 120 V rms line voltage. A one-pole 300 Hz filter preconditions the input signal prior to a low drift differential input amplifier. Amplitude modulation is used to implement transformer isolation (1500 V rms input-to-output and power).

Isolated front-end circuitry power is supplied by a DC/DC converter. The output section contains a two-pole low pass filter (-3 dB @ 300 Hz), a buffer amplifier and a power oscillator. The two-pole output filter and subsequent buffer ensures that a low noise, low impedance (<1 $\Omega$ ) signal is available at the output to drive loads to 2 k $\Omega$  minimum.

## 7B21 Models Available

Model	Input Range	Output Range
7B21	-10 V to +10 V	-10 V to +10 V

## 7B21 Specifications

(typical @ +23°C ±5°C and  $V_s = +24$  V dc)

Description	Model 7B21
<b>Input Ranges</b>	
Standard Ranges	-10 V to +10 V
Custom Ranges	Not Available*
<b>Output Range Options (<math>R_L &gt; 2</math> k<math>\Omega</math>)</b>	-10 V to +10 V
<b>Accuracy<sup>1</sup></b>	
Initial @ +25°C	±0.01% Span (±0.1% Span, maximum)
Nonlinearity <sup>2</sup>	±0.02% Span, maximum
Input Offset vs. Temperature	N/A <sup>3</sup>
Span vs. Temperature	±35 ppm/°C
Output Offset vs. Temperature	±0.001% Span/°C
Input Bias Current	30 pA (200 pA, maximum)
<b>Input Resistance</b>	
Power ON	2 M $\Omega$
Power OFF	30 k $\Omega$ , minimum
<b>Output Noise</b>	
5 MHz Bandwidth	6 mV peak
10 Hz to 100 kHz Bandwidth	1.5 mV rms
0.1 Hz to 10 Hz Bandwidth	6 $\mu$ V peak
Bandwidth, -3 dB	300 Hz
Output Rise Time, 10% to 90% Span	1 ms
<b>Common-Mode Voltage (CMV)</b>	
Input-to-Output and Power	1500 V rms continuous
<b>Common Mode Rejection (CMR)</b>	
Input-to-Output and Power @ 50/60 Hz	100 dB
Input Protection	120 V rms, continuous ±35 V dc, continuous
Input Transient Protection	ANSI/IEEE C376.90.1-1989 IEEE-STD 472 IEC 255-4, Class II
Output Resistance	< 1 $\Omega$
Voltage Output Protection	Continuous Short to Ground

Voltage Range, Operating	+19 V dc to +29 V dc
Current	+35 mA, maximum
Sensitivity	$\pm 0.0001\%$ /% of $V_s$
Mechanical Dimensions	1.663" x 2.11" x 0.563" (42.24 mm x 53.6 mm x 14.3 mm)
Weight	60 grams

**Environmental**

Temperature Range	
Operating	-40°C to +85°C
Storage	-40°C to +85°C
Relative Humidity, 24 hours	0 to 90% @ +60°C non-condensing
ESD Sensitivity	IEC 801-2, Level 2
RFI Susceptibility	$\pm 0.5\%$ Span error @ 400 MHz, 5 Watt, 3 ft

Warm-up time required to meet specifications is approximately 10 minutes.

\* Contact factory for OEM requirements.

<sup>1</sup> Includes the combined effects of repeatability, hysteresis, and nonlinearity.

<sup>2</sup> Nonlinearity is calculated using best-fit straight line method.

<sup>3</sup>  $R_z$  is the value of the RTD resistance at the lowest measurement point.  $R_{span}$  is the change in resistance over the measurement span.

Specifications subject to change without notice.

# PIN CONFIGURATIONS AND FUNCTIONAL DESCRIPTIONS

Figure 3 7B21 Input Field Connections

Table 1. Pin Function Descriptions—

Pin No.	Input Module Function	Output Module Function
0	SENSOR INPUT	NOT USED
1	INPUT HIGH	OUTPUT HIGH
2	INPUT LOW	OUTPUT LOW
3	POWER SUPPLY (DC)	POWER SUPPLY (DC)
4	OUTPUT VOLTAGE	INPUT VOLTAGE
5	OUTPUT & POWER COMMON	INPUT AND POWER COMMON

## ESD CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although this product features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.

## OUTLINE DIMENSIONS

Figure 5. Outline Dimensions

**NOTES**

## NOTES

Outline Dimensions (page 6 or page 7). Thickness of module at top states as 0.883 (14.3), should be 0.563 (14.3)

Input Bias Current (page 3), stated as 30pA (200pA maximum), should be 3nA
